Drawings

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the "pump located inside of the integrated circuit" for claim 14. "optical to electrical interface for first integrated circuit die" for claim 25 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 6-9, 12- 20 and 22-24, 26-29 are rejected under 35 U.S.C. 102(b) as being anticipated by Fujisaki et al. (5,763,950). Fujisaki et al. disclose a integrated circuit chips/package comprising an integrated circuit die having an active surface 11, and a cooling fluid /coolant 235 directly contact and move across the active surface 11, substrate 12, solder bumps 13, heat sink 23, interposer, internal pump/fan 133, and external pump 197 for flowing cooling fluid in the circuit. See Fig. 1, 20, 28 and 37

Claims 4, 22- 23 and 25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fujisaki et al. in view of Patel (5,396,403). Lin et al. Fujisaki et al. disclose the invention substantially as claimed as stated above. However, Fujisaki et al. do not disclose a coupling feature to the both side of an interposer by solder bumps . Patel teaches the use of a coupling feature to the both sides of an interposer 65 by solder bumps 17 in an integrated circuit for the purpose of making a desired integrated circuit. Patel also disclose an electrical cable 89 for power connection. See Fig. 4 Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the integrated circuit chips of Fujisaki et al. in view of Patel such that an a coupling feature of the interposer and solder bumps could be provided in order to make the integrated circuit in a desired manner.

Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Fujisaki et al. in view of Patel as applied to claim 4 above and further in view of Lin et al. (6,188,578 B1). Fujisaki et al. in view of Patel disclose the invention substantially as claimed as stated above. However, Fujisaki et al. in view of Patel do not disclose an underfill material. Lin et al. teach the use of an underfill material 18 in an integrated circuit package for the purpose of serving an integrated circuit. See Fig. 1. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the integrated circuit chips of Fujisaki et al. in view of Patel and further in view of Lin et al. such that an underfill material could be provided in order to serve the integrated circuit.

Response to Arguments

Applicant's arguments, see remarks of amendment, page 8, filed 01/12/04, with respect to the rejection(s) of claim(s) 1-9, 12-20 and 22-29 under 35 U. S. C. 103(a) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of new prior art. Therefore, Applicant's arguments with respect to the above claims are moot in view of the new ground(s) of rejection.
